Footnote

Reference: Rogers, Q.R. and Harper, A.E. (1965). J. Nutrition 87, 267-273 (Modified). Recommended use level in rat diets is 5.0%. The reference article specified the use of Na₂SeO₃·5H₂O. CA.170760 formula uses the anhydrous form, Na₂SeO₃. This mineral mix has a tendency to harden and become lumpy shortly following mixing and grinding. This is due to the composition of the mixture.
